

# Backup Solutions for Microsoft 365, OneDrive and SharePoint

## Why You Need a Backup Solution for M365 Mailboxes, OneDrive and SharePoint

There's a common misconception that Microsoft fully backs up Office 365 mailboxes and files stored within OneDrive and SharePoint Document libraries as part of the subscription, but this is not the case.

- **Microsoft doesn't provide native options to back up Office 365 data:** Microsoft is responsible for providing the necessary infrastructure and ensuring M365 works, but it's the customer's responsibility to protect their M365 data – mailboxes and files stored within OneDrive or SharePoint Document Libraries.
- **Microsoft cannot help with unexpected data loss or damage:** Having a solid backup solution in place ensures that even if the mailboxes or files disappear from the network or are rendered useless, you have access to a backed-up copy, eliminating problems or repercussions that could arise from the missing data.
- **Problems with accessing and searching data:** Without a single backup location for a company's content, this data cannot be protected and stored centrally for easy access, searching and recovery.

## Protect your M365 Data with N8 Protect & Altaro

Through our partnership with Altaro and their robust Office 365 Backup solution, we can provide a reliable Office 365 backup and recovery solution that:

Automatically backs up your mailboxes and files stored in OneDrive and SharePoint

Stores them to a central and secure online location

Allows you to manage and monitor your backups from a central management console

Helps you recover any lost or damaged files should something go wrong

All for an unbeatable yearly fee per user. You can scale to tens of thousands of users.
